

Opening on 02.06.2020

Bridge infrastructure for the collective good. We want to contribute to it by founding **Equi Bridges Ltd.**

Sound engineering services and good owner's decisions add significantly to a functioning infrastructure. This is not only the case for the planning of new bridges or for bridge rehabilitations but also for strategic and operational planning of maintenance. A holistic and proactive approach can avoid major implications to arise. This is the most economical way in the long run to sustainably operate bridge infrastructures.

We cover the entire spectrum of services related to bridge engineering and asset management. Furthermore, we collaborate with partner companies in order to save owner's time and to prevent them from unnecessary expenses.

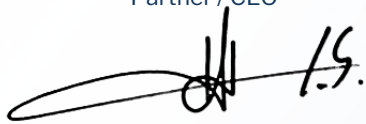

Bridges connect fascinatingly. We love bridges and we are looking forward to act jointly with you on bridge projects.

From the 2nd of June 2020, we are there for you – at Mainstation 1901 in Chur. Don't hesitate to contact us!

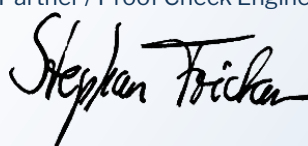

Kristian Schellenberg

PhD, MSc ETH/SIA
Partner / CEO

Stephan Fricker
