

Strengthening the Team

CFO Mirco Protner and Bridges Expert Vasco Amaral joining **Equi Bridges**

Equi Bridges is specialized on bridge engineering and focuses on high quality with efficient processes. Accordingly, we are pleased to announce the onboarding of another bridge engineering expert, Vasco Amaral, and the strengthening of our management team with Mirco Protner as of February 1st, 2021.

Mirco Protner joins as Partner and CFO and as a member of the Executive Board he will be responsible for the financial and administrative matters of our company. Mirco will also be responsible for the introduction and monitoring of our quality management system. Mirco and Kristian graduated together in Civil Engineering at ETH Zurich in 2003 and during their studies they did an exchange year together in Madrid (UPM). After several years working as project engineer and project manager on the contractor side, Mirco completed an MBA and moved to the financial industry. Now after 10 years, Mirco returns to engineering and will provide Equi Bridges with powerful administration, expand management efficiencies, and support project delivery.

Vasco Amaral joins as Chief Engineer and specialist in construction engineering and will contribute with his extensive experience in international design-and-build projects. His strengths in detailed design as well as in the assessment of difficult construction phases will also shape our services for contractors. Vasco is a bridge engineer through and through. In his career, he has been significantly involved in technically challenging bridge projects and has coordinated major projects at the interface between the client, the contractor and the engineering teams. Vasco, Dawid, Poul and Kristian have already been working colleagues in international major bridges in Denmark and are looking forward to working together again.

Mirco Protner

MSc ETH, MBA, CFA
Partner / CFO

Vasco Amaral

MSc Eng. Civil and Structural Engineering
